

$$\frac{1}{4} \frac{h\nu}{\lambda}$$

$$J = \frac{neV_e q}{\lambda}$$

$$\frac{1}{\sqrt{d} n^2}$$

$$\frac{1}{\sqrt{d} E}$$

$$\frac{D}{D^2 D}$$

MAJOR

Elements of Materials Processing (PYL116)

6 May, 2016 (10:50 AM)

Time: 70 minutes

Max. Marks: 25

$$+ D \cdot \frac{dy}{dx}$$

$$\frac{J = \frac{C}{cm^3} = D$$

About the optional quiz, QUIZ-4

- The optional quiz Q4 (10 Marks) will be held today after collecting the Major answer-scripts (i.e., around 12:00 noon today)
- Those who write Q4, their **lowest scored quiz marks** (out of Q1 or Q2) will compulsorily be replaced with the marks scored in Q4.
- Attendance will be taken separately for Q4.

1. The RHEED oscillations are not observed below a certain temperature. Why? .....2
2. Derive the expression of **biaxial** stress present in a film (thickness  $d_f$ ) deposited on a substrate of thickness  $d_s$  (assume  $d_s \gg d_f$ ) in terms of the radius of curvature  $R$  of the film. ....5
3. In a RHEED pattern obtained using an e-beam of energy 50 keV, the central and the adjacent streaks are found to be 5 mm distance apart. If the RHEED screen is located 20 cm away from the film, find the interatomic spacing (in Å) on the surface of the growing film. ....3
4. Why the conventional MBE is less suitable for growing epitaxial quality III-V phosphide thin films? What is the solution to this problem? 2
5. Prove that the cathode target, in case of RF-sputtering, bias itself negatively for most of the time. 4
6. Discuss the origin of the hysteresis observed in the plot of target voltage as a function of reactive gas flow rate in a reactive sputtering pressure. 3
7. What is Paschen's Law? Discuss the reasons that suggest that there is always an optimum pressure needed for striking and sustaining the glow discharge plasma. 3
8. Differentiate between the *positive* and *negative* photoresists. Also discuss the origin of such a difference. 3

Constants:  $k_B = 1.38 \times 10^{-23}$  J/K,  $R = 1.987$  cal/mol/K (=8.31451 J/K/mol);  $h = 6.6 \times 10^{-34}$  J-s

$\times 10^{10}$
